

GreenForever¹, Tokyo, Japan, 2034

The Chinese Health Institute **Green Minds R&D** together with Romanian artist-activist-chemist **Iuliana Varodi**, have recently developed **GreenForever**, a new food supplement that contains elements extracted from leaves and roots of several ancient plants from seven continents, in a combination that can help restore the common green senses in the human body and mind.

The specific natural extracts contained in **GreenForever**, will restore and strengthen the body's sensitivity to the inter-dependency with the surrounding nature². Taken once a day over a period of three months, it works by gradually allowing signals of the environment to be perceived at the level of sensorial organs and translated to the brain via emotions into feelings that will gradually restore the natural holistic awareness and caring attitude toward own body and its environment. Once this consciousness has been established, a weekly walk in a forest or park will keep the balance safe for years. **GreenForever** has no negative side effects, which makes it safe to repeat a cure, whenever contextual situations are not allowing the weekly forest walks.

A simple way to test the results: Hold a fresh mass of earth with grass within your hands for one minute. Observe the sensations you experience from the hands to other parts of the body (stomach, heart, shoulders, spine, brain etc). Pause for two minutes. Hold a bunch of broken electronics within your hands for one minute and observe again the sensations you experience through the body. Swallow one **GreenForever** pill with a glass of water and wait seven minutes in order to have the substances activated in your body – once arrived in the stomach they instantly dissolve, pass through the blood and affect the nervous system within five minutes – then repeat the experiment – with both the earth and the electronics. Observe the sensations again and note the differences.

Possible side effects: the need to dictate, dominate or manipulate others disappears around the seventh month of the cure. Consumers have reported to find this effect an extra feature, as it increases the feeling of green peace and harmony in their daily interactions. The effects on the relation to money is currently under close observation.
